E-SERVICES

# Manageability and transparency in your supply chain

*Geodis Wilson makes you more competitive by increasing the visibility and manageability of your supply chain and by reducing associated risks and costs. Our e-services portfolio provides indispensable building blocks for our integrated supply chain solutions. They give you the power to access your data, make quick decisions and get customers and suppliers on the same wavelength. Specifically, we offer a range of e-services, including:*

## Freight Monitor

Freight Monitor is our advanced online track & trace tool, which makes the freight management process easier and more efficient. By logging into your personal Freight Monitor account you can track all shipments or individual products, down to the individual article number. You can also access documents such as master air waybill, bill of lading and commercial invoices. You can upload documents and e-mail status updates to others. Freight Monitor data can easily be loaded into your own applications.

## Freight Planner

Freight Planner is a web-based tool for time and price information and electronic booking. It shows up-to-date information about pricing and transit times and gives you real-time booking confirmation for all our services. Freight Planner can be used by multiple users in your organisation, meaning your internal shipping department receives fewer queries. Freight Planner can easily be configured so that you control your inbound shipments. This control could reduce your total logistics expenses by booking shipments on the most efficient means of transport. Freight Planner and Freight Monitor can share data seamlessly.

## Customer Portal

Our Customer Portal is a dedicated online environment for our larger customers and the Geodis Wilson people that serve them. The portal provides easy access to all documents that relate to the overall relationship between us, including minutes of meetings, agreements, reports, and contact lists of key people. With dozens of people involved in your projects, this tool make sure everyone is on the same wavelength.

## Freight management, value-added services and integrated solutions

Geodis Wilson also offers air freight, sea freight and Sea-Air combined services. Our value-added services release tied-up capital while your goods are in transit. These include stocktaking, testing, pick & pack, labelling and bar coding, assembly and print-on-demand services. In addition, we offer customs clearance services, transport insurance and storage insurance. By combining freight services, value-added services and e-services, we create integrated solutions that makes our customers more competitive.

### **Introducing Geodis Wilson**

*Geodis Wilson makes customers more competitive by delivering their cargo across five continents by sea and air and by making their supply chain transparent and easy to manage. Geodis Wilson has 4,600 employees in 44 countries. Geodis Wilson is the result of the merger between Geodis Overseas and TNT Freight Management, a 164-year-old company formerly known as Wilson Logistics. It is the freight management expert of the Geodis Group, a global logistics provider with 26,000 employees in a network covering 120 countries.
